BODY LIFT INSTALL INSTRUCTIONS

96-02 4RUNNER

Support@toyteclifts.com
Read all of the installation instructions prior to ToyTec Lifts Coil Over installation. ToyTec Lifts L.L.C. recommends that this be installed by a certified auto technician.

1. Park the Vehicle on a level concrete surface with the steering wheel centered.
2. Block/chuck rear wheels to prevent the vehicle movement.
3. Remove the stock bumper.
4. Locate all body mounts on vehicle. The nuts might be seized so you may need to use a good rust penetrator to help loosen the bolts.

5. Remove the inner plastic door panels along the all the doorway. Also remove the interior quarter panel in front, under the dash on both the driver/passengers sides.
6. Pull back the carpet that is above each bolt.

7. Once the all the bolts are exposed remove the black circular caps that are on top of the bolts.
8. Each bolt that is connected to the frame has a washer with a notch attached to the bolt; there is a notch in the body to catch so the bolt does not spin when tightening.

9. There should be two bolts on each side of the rear hatch, four bolts on each side of the rear doors, two inside both of the front doors and two on the front bumper.
10. Remove the front bumper for easy access to the front two bolts.
11. After removing all the bolts hammer off the washers. You will need to reuse these.
12. Loosen the steering shaft at the rag joint to help minimize tension when lifting the body. **NOTE: DO NOT MOVE STEERING WHEEL AFTER LOOSENING THE BOLTS.**

13. Also, loosen the battery cable harness to prevent damage to this when lifting the body.
14. **FOR 2” BODY LIFTS** remove the radiator support bolts and bolt on the radiator drop bracket. **NOTE:** The bolt that is welded on the bracket should be above the original bolt. You will also need to bend the radiator guide so that it flat.
15. If using an auto shop lift. Lift both sides of the body. If using a floor jack only lift one side of the body at a time. Only lift the body high enough so that the spacers can slide between the body and the bushings on the frame. **NOTE** THE BODY SHOULD LIFT EASILY. IF THE BODY HAS ANY HESITATION STOP AND FIND WHAT IS STOPING THE BODY FROM COMING OFF THE FRAME.  
16. Put all the body lift spacers in, along with the longer bolts with the stock washers in the same order they came off. The smaller spacers go on the front two body mounts that are located behind the front bumper. Hand tighten the nuts provide and slowly lower the body down.
